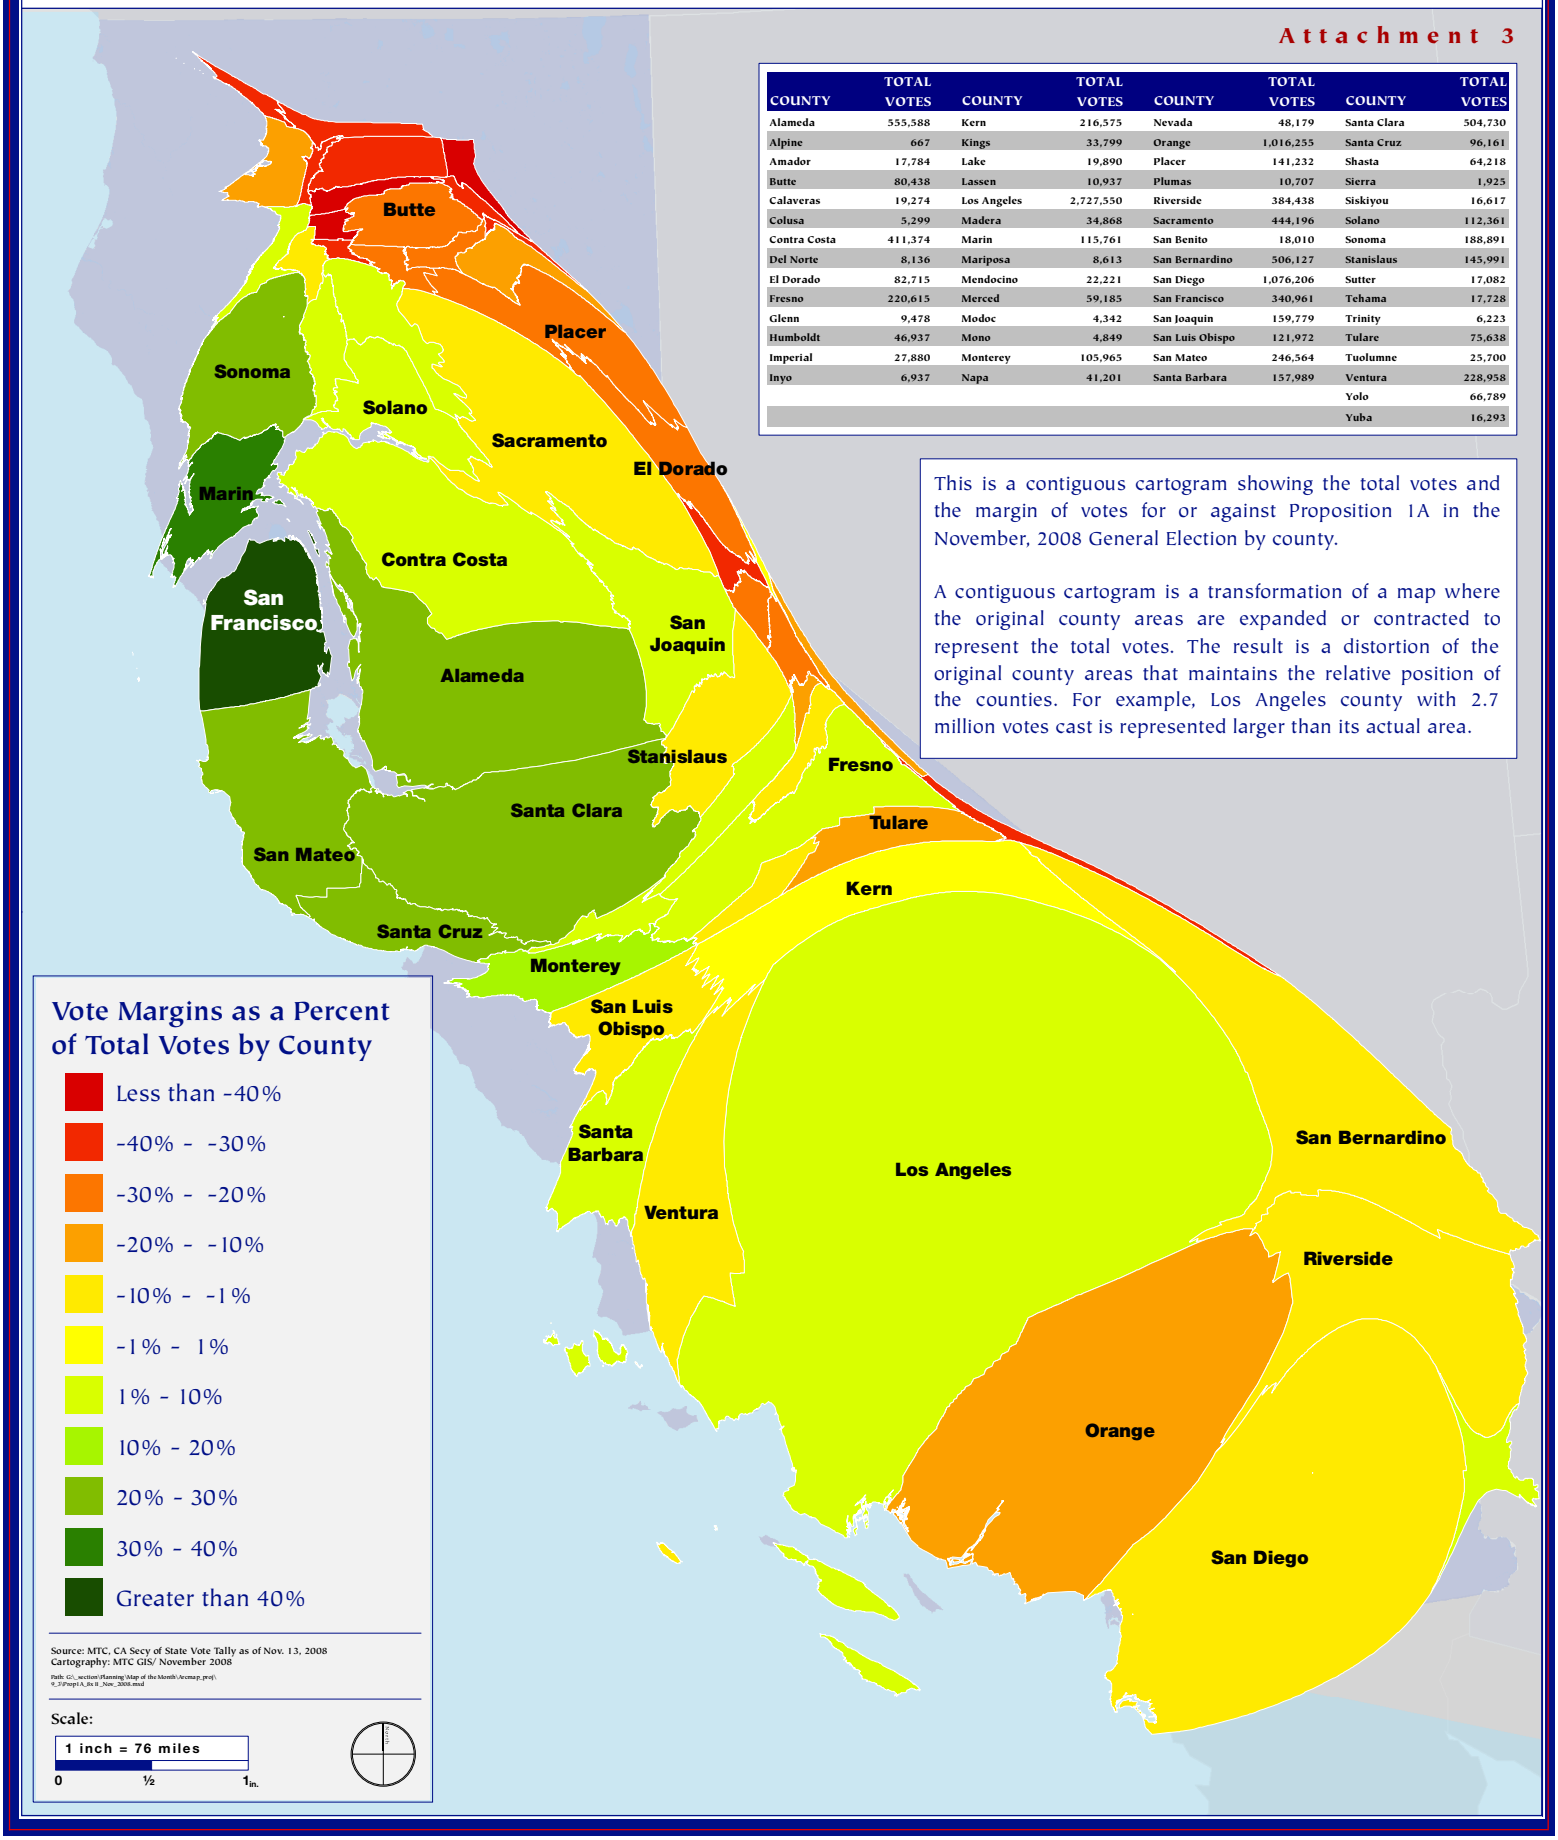
This is a contiguous cartogram showing the total votes and the margin of votes for or against Proposition 1A in the November, 2008 General Election by county.


A contiguous cartogram is a transformation of a map where the original county areas are expanded or contracted to represent the total votes. The result is a distortion of the original county areas that maintains the relative position of the counties. For example, Los Angeles county with 2.7 million votes cast is represented larger than its actual area.
